Tejas Kothari

Email: tejaskothari03@gmail.com **Phone:** +91 9644049059 **LinkedIn:** linkedin.com/in/tejaskothari03

Skills

Languages & Frameworks: Python, FastAPI, Django, Flask, Java, Springboot, SQL, LogQL

Systems & Databases: Distributed Systems, LLD, HLD, System Design, Microservices, PostgreSQL, Redis

Tools and Others: AWS, Data Structures, Algorithms, Multiprocessing, Multithreading, Prometheus, Grafana, Loki, Kubernetes, Datadog

Work Experience

Software Engineer 2 | CoinTracker | Dec 2025 – April 2026

- **Led 3 blockchain integrations (Bittensor, Starknet, Tezos)** end-to-end with full test coverage, enabling new user segments and **increased revenue.**
- **Fixed balance discrepancies across 5 chains (Bittensor, Polygon, Cardano, Base, Solana)** by identifying upstream data issues**, improving financial data** correctness**.**
- **Built a code-generation tool for blockchain integrations**, cutting setup time from **1-2 weeks to 2 days** and accelerating development velocity.
- **Improved reliability and reduced production failure by 16%** via node failover, state-driven flows, **and removal of N+1 queries**, reducing failures and latency.
- **Hardened CSV ingestion pipeline** with race-condition handling, validation, accurate counters and improving data integrity.

Software Development Engineer II | ObserveAI | Nov 2024 – July 2025

- Transitioned to spearhead **core observability infrastructure,** instrumenting custom backend metrics and developing Helm charts for Grafana & Datadog alerts, to enhance **real-time, cross-platform** incident response**.**
- **Enhanced observability and debugging** in **asynchronous Python applications** by **implementing context-enriched** logging, streamlining issue identification and resolution in distributed environments.
- Engineered a custom load testing framework for **Text-to-Speech (TTS), Speech-to-Text (STT), and LLM vendor APIs**, fine-tuning configurations to **optimize accuracy, response time, and cost-efficiency**.
- Strengthened **observability infrastructure** by creating **Kubernetes service labels** and log aggregation standards, enabling **accurate log scraping, unified collection** across **microservices**, and faster debugging in distributed environments.

Software Development Engineer II | 1mg | Mar 2024 – Nov 2024

- Decomposed the inventory management codebase from a Ruby on Rails **monolith** to Python & Sanic microservices architecture reducing catalog-affiliated **APIs latency by 40%**.
- Implemented **Tenant Management microservice** to support **multi-tenant architecture.**
- Designed a new schema to **right-size the database** aligning with the **SaaS model**, ensuring **efficient data storage** and **retrieval**.

Software Engineer II | Sandvine | Jun 2021 – Feb 2024

- Developed **SQL-powered RESTful APIs** to filter internet activity data**, 1M+ internet subscribers** driving **40% higher user engagement.**
- Innovated a proprietary **algorithm** to detect **social media uploads** with precision rate of 90% from raw internet data, delivering **advanced data analysis capabilities**.
- Composed **state management module** to navigate PCAP (Packet Capture) files through stages like upload, validation, IP discovery, consolidation **achieving 30% faster processing** times.
- Developed a **cleanup module** for **pruning of records** from the database, using **configurable date ranges** resulting in up to a **23TB reduction in storage requirements** of customer's on-premise deployment.

Projects

Rupee Engine Feb 2026 – Present

- Built a CLI-based equity analysis system covering **1300+ NSE stocks**, combining fundamentals, technicals, and sentiment into a **unified pipeline**.
- Designed a modular investment engine with **11 pluggable algorithms** (momentum, value, mean reversion, sentiment, etc.) for **stock scoring** and portfolio optimization.
- Implemented end-to-end data pipelines with **async ingestion**, caching (TTL-based), and incremental refresh using NSE APIs and Screener data.
- **Tech Stack:** Python, httpx module, asyncio, React

AOV Studios Website Jun 2023 – Aug 2023

- **Led and developed project** to create React-based **SPA** for **official website** of AOV Studios firm**.** Deployed at https://aovstudios.co.in/
- **Tech Stack:** Javascript, React

Twitter Malicious Bot detection Oct 2021 – Oct 2021

- Innovated a metric **to identify malicious bots and botnets** on Twitter with a twitter **handle** or **hashtag** as input to the main process under **Sandvine 2021 Hackathon** with **90% confidence**.
- Presented the **prototype** to a **C-level panel** at an internal hackathon, **winning** among **40+ competing teams** under the “Most radical Idea” category.
- **Tech Stack:** Java, Python, SQL, Redis, Vertica, Twitter API

Education

Vellore Institute of Technology
Bachelors in Computer Science (CGPA - 8.24) **Aug 2017 – Jun 2021**
